

Using the Webmin APT repository

If you like to install and update Webmin via APT, edit the `/etc/apt/sources.list` file on your system and add the lines :

```
deb http://download.webmin.com/download/repository sarge contrib
deb http://webmin.mirror.somersettechsolutions.co.uk/repository sarge
contrib
```

You should also fetch and install my GPG key with which the repository is signed, with the commands :

```
cd /root
wget http://www.webmin.com/jcameron-key.asc
apt-key add jcameron-key.asc
```

You will now be able to install with the commands :

```
apt-get update
apt-get install webmin
```

All dependencies should be resolved automatically.

Source Packages

The files needed to build the Debian package are [deb/webmin_1.590.dsc](#), [deb/webmin_1.590.diff](#), and [webmin-1.590.tar.gz](#) .
